

IN THE CLAIMS:

Claims 1-40 have been cancelled, and claims 41-76 are pending, as indicated in the complete listing of claims provided below.

1-40. (Cancelled)

41. (Previously presented) A method to edit time based streams of information, the method comprising:

displaying together a first indicia of a first time based stream of information and a second indicia of a second time based stream of information, the first and second time based streams of information being correlated with each other in time;

displaying a plurality of edit point markers together with the first indicia and the second indicia, the plurality of markers defining a first selected amount of time of the first time based stream of information and a second selected amount of time of the second time based stream of information, the plurality of markers being adjustable in response to user input so that the first selected amount of time is different from the second selected amount of time; and

editing a third time based stream of information and a fourth time based stream of information according to the plurality of markers to include the first selected amount of time of the first time based stream of information and the second selected amount of time of the second time based stream of information in the third and fourth time based streams of information respectively.

42. (Previously presented) The method of claim 41, wherein the first time based stream of information overlaps at least partially in time with the second time based stream of information.
43. (Previously presented) The method of claim 42, wherein the first selected amount of time of the first time based stream of information overlaps at least partially in time with the second selected amount of time of the second time based stream of information.
44. (Previously presented) The method of claim 41, wherein the first and second time based streams of information are from one source media; the first time based stream of information comprises audio information; and, the second time based stream of information comprises video information.
45. (Previously presented) The method of claim 41, wherein said editing is in one operation.
46. (Previously presented) The method of claim 42, further comprising:
displaying a third indicia of the third time based stream of information and a fourth indicia of the fourth time based stream of information together with the first indicia and the second indicia and the plurality of markers.
47. (Previously presented) The method of claim 46, wherein the plurality of markers defines a plurality of edit points in the first, second, third and fourth time based

streams of information; the plurality of edit points defines the first selected amount of time, the second selected amount of time, and positions in the third and fourth time based streams of information in which the first selected amount of time of the first time based stream of information and the second selected amount of time of the second time based stream of information are included.

48. (Previously presented) The method of claim 47, wherein the plurality of markers comprise less than six individually adjustable markers.
49. (Previously presented) The method of claim 46, further comprising:
determining the first selected amount of time using one of the plurality of markers,
the one of the plurality of markers being on one of: the second, third and
fourth indicia.
50. (Previously presented) The method of claim 49, wherein the one of the plurality of markers defines an edit point on the third indicia.
51. (Previously presented) The method of claim 41, wherein said editing comprises:
replacing a portion of the third and fourth time based streams of information with a
corresponding portion of the first selected amount of time of the first time
based stream of information and the second selected amount of time of the
second time based stream of information.
52. (Previously presented) The method of claim 41, wherein said editing comprises:
inserting the first selected amount of time of the first time based stream of

information and the second selected amount of time of the second time based stream of information into the third and fourth time based streams of information respectively without overwriting a portion of the third and fourth time based streams of information.

53. (Previously presented) A machine readable medium containing executable computer program instructions which when executed by a data processing system cause said system to perform a method to edit time based streams of information, the method comprising:

displaying together a first indicia of a first time based stream of information and a second indicia of a second time based stream of information, the first and second time based streams of information being correlated with each other in time;

displaying a plurality of edit point markers together with the first indicia and the second indicia, the plurality of markers defining a first selected amount of time of the first time based stream of information and a second selected amount of time of the second time based stream of information, the first selected amount of time being different from the second selected amount of time; and

editing a third time based stream of information and a fourth time based stream of information according to the plurality of markers to include the first selected amount of time of the first time based stream of information and the second selected amount of time of the second time based stream of information in the third and fourth time based streams of information respectively.

54. (Previously presented) The medium of claim 53, wherein the first time based stream of information overlaps at least partially in time with the second time based stream of information.
55. (Previously presented) The medium of claim 54, wherein the first selected amount of time of the first time based stream of information overlaps at least partially in time with the second selected amount of time of the second time based stream of information.
56. (Previously presented) The medium of claim 53, wherein the first and second time based streams of information are from one source media; the first time based stream of information comprises audio information; and, the second time based stream of information comprises video information.
57. (Previously presented) The medium of claim 53, wherein said editing is in response to one user input.
58. (Previously presented) The medium of claim 54, wherein the method further comprises:
displaying a third indicia of the third time based stream of information and a fourth indicia of the fourth time based stream of information together with the first indicia and the second indicia and the plurality of markers.
59. (Previously presented) The medium of claim 58, wherein the plurality of markers

defines a plurality of edit points in the first, second, third and fourth time based streams of information; the plurality of edit points defines the first selected amount of time, the second selected amount of time, and positions in the third and fourth time based streams of information in which the first selected amount of time of the first time based stream of information and the second selected amount of time of the second time based stream of information are included.

60. (Previously presented) The medium of claim 59, wherein the plurality of markers comprise less than six individually adjustable markers.
61. (Previously presented) The medium of claim 58, wherein the method further comprises:
determining the first selected amount of time using one of the plurality of markers,
the one of the plurality of markers being on one of: the second, third and fourth indicia.
62. (Previously presented) The medium of claim 61, wherein the one of the plurality of markers is displayed for the third time based stream of information.
63. (Previously presented) The medium of claim 53, wherein said editing replaces a portion of the third and fourth time based streams of information with a corresponding portion of the first selected amount of time of the first time based stream of information and the second selected amount of time of the second time based stream of information.

64. (Previously presented) The medium of claim 53, wherein said editing inserts the first selected amount of time of the first time based stream of information and the second selected amount of time of the second time based stream of information into the third and fourth time based streams of information respectively without overwriting a portion of the third and fourth time based streams of information.
65. (Previously presented) A data processing system to edit time based streams of information, the data processing system comprising:
- means for displaying together a first indicia of a first time based stream of information and a second indicia of a second time based stream of information, the first and second time based streams of information being correlated with each other in time;
 - means for displaying a plurality of edit point markers together with the first indicia and the second indicia, the plurality of markers defining a first selected amount of time of the first time based stream of information and a second selected amount of time of the second time based stream of information;
 - means for adjusting the plurality of markers in response to user input so that the first selected amount of time is different from the second selected amount of time; and
 - means for editing a third time based stream of information and a fourth time based stream of information according to the plurality of markers to include the first selected amount of time of the first time based stream of information and the second selected amount of time of the second time based stream of information in the third and fourth time based streams of information

respectively.

66. (Previously presented) The data processing system of claim 65, wherein the first time based stream of information overlaps at least partially in time with the second time based stream of information.
67. (Previously presented) The data processing system of claim 66, wherein the first selected amount of time of the first time based stream of information overlaps at least partially in time with the second selected amount of time of the second time based stream of information.
68. (Previously presented) The data processing system of claim 65, wherein the first and second time based streams of information are from one source media; the first time based stream of information comprises audio information; and, the second time based stream of information comprises video information.
69. (Previously presented) The data processing system of claim 65, wherein said means for editing edits the third and fourth time based streams of information together.
70. (Previously presented) The data processing system of claim 66, further comprising:
means for displaying a third indicia of the third time based stream of information and
a fourth indicia of the fourth time based stream of information together with
the first indicia and the second indicia and the plurality of markers.
71. (Previously presented) The data processing system of claim 70, wherein the plurality

of markers defines a plurality of edit points in the first, second, third and fourth time based streams of information; the plurality of edit points defines the first selected amount of time, the second selected amount of time, and positions in the third and fourth time based streams of information in which the first selected amount of time of the first time based stream of information and the second selected amount of time of the second time based stream of information are included.

72. (Previously presented) The data processing system of claim 71, wherein the plurality of markers comprise less than six individually adjustable markers.
73. (Previously presented) The data processing system of claim 70, further comprising:
means for determining the first selected amount of time using one of the plurality of markers, the one of the plurality of markers being on one of: the second, third and fourth indicia.
74. (Previously presented) The data processing system of claim 73, wherein the one of the plurality of markers defines an edit point on the third indicia.
75. (Previously presented) The data processing system of claim 65, wherein said means for editing replaces a portion of the third and fourth time based streams of information with a corresponding portion of the first selected amount of time of the first time based stream of information and the second selected amount of time of the second time based stream of information.
76. (Previously presented) The data processing system of claim 65, wherein said

means for editing inserts the first selected amount of time of the first time based stream of information and the second selected amount of time of the second time based stream of information into the third and fourth time based streams of information respectively without overwriting a portion of the third and fourth time based streams of information.
